A tunneling machine damed severely an Edesur High Tension cable

- *The 220 KV underground cable, which connects the Ezeiza Substation with the Perito Moreno Substation and Transradio Substation, was severely damaged at Villa Soldati*

Buenos Aires, January 5, 2018. A tunneling machine working for another company damaged a line of High Voltage that connects the Ezeiza-Perito Moreno corridor, in Villa Soldati, Buenos Aires capital.

The **220 KV** underground cable, which connects the Ezeiza Substation with the Perito Moreno Substation and Transradio Substation, was severely damaged at Villa Soldati by heavy machinery external to Edesur.

As a consequence of this event, **the Perito Moreno substation** was affected causing interruptions in the service at different points of the concession area.

At this time the company has started to repair the 220 KV cable, which is highly complex and will take several days. We have also begun to install **10 "four-pack" electricity generators** to cover the demand.
