**Because of the damage in a line of High Tension produced by an external tunneling machine, Edesur scheduled rotary energy interruptions in some neighborhoods**

- *Rotary interruptions will not exceed 6 hours, mainly in the neighborhoods: Villa Soldati, Liniers, Pompeii, Caballito, Constitución, Flores, Villa Lugano and Mataderos.*

**Buenos Aires, January 12, 2017.** To overcome the contingency caused by reasons beyond its responsibility, Edesur had to program a series of rotating interruptions in the medium voltage network to protect the system from major damages that could affect more users.

To minimize the consequences of the damage produced on Thursday, January the 4th, when a tunneling machine working for another company damaged the high voltage "Line 62" in Villa Soldati, 200 operators are working to repair the line, while five "Four Pack" 5 MVA generating sets were placed in the substations Perito Moreno, Constitución and Ramón Falcón. In addition, 28 generators of up to 1,000 KVA were installed throughout the affected area - the southwest corridor of Buenos Aires City- to cover the high demand generated by the heat wave.

Rotating interruptions will not exceed 6 hours, mainly in the neighborhoods: Villa Soldati, Liniers, Pompeya, Caballito, Constitución, Flores, Villa Lugano and Mataderos.

LA EMPRESA LAMENTA EL EPISODIO AJENO A SU RESPONSABILIDAD Y HACE SABER A LA OPINIÓN PÚBLICA QUE ESTÁ TRABAJANDO CON TODOS SUS RECURSOS DISPONIBLES PARA SUPERAR ESTA CONTINGENCIA.
